

D5000 STANDARD TRANSPARENCY VIEWER

Economical D5000 Transparency Viewers for Tabletop Viewing

These GL model transparency viewers are a welcome addition to the outstanding Graphiclite® line of D5000 transparency viewers as they bring the high quality of GTI® products to a new, affordable level. Graphiclite 100® color viewing lamps, in combination with a spectrally balanced reflector and diffuser, provide the accuracy for which GTI is famous. The low price means that more color professionals can enjoy the benefits that true standard viewing provides.

Graphiclite 100 Lamps

These color viewers combine the same Graphiclite 100 color viewing lamp used on more expensive color viewers, the reflector and the spectrally balanced diffuser. This combination provides a true D5000 color viewing system at an affordable price for all critical color viewing professionals.

Light Intensity Control

The units are available with a rotary or digital dimming feature that allows the user to control the intensity of the light. This feature is ideal for soft proofing applications.

Built-in Quality Control

The optional LiteGuard® II monitor features an exclusive digital circuitry design to emit a dynamic visual signal when the viewer:

- Requires relamping
- Has warmed up and stabilized
- Reaches 25%, 50% and 100% of the lamps' critical color life
- Experiences a significant drop in voltage

Transparency/Reflection

The GL can also be used with a PDV-e professional desktop reflection viewer to create a combination print/transparency

viewing system. See our PDV-e brochure for details on this option.
