

MULTI-SOURCE PORTABLE DESKTOP VIEWERS

The portable PDV-2e/M multi-source desktop viewers provide an industry-compliant viewing station that is ideal for presentations, lab applications and any situation where accurate color viewing under multiple sources of light is critical to product development and quality.

PDV-2e/M4 with 4 light sources and ETM

The PDV-2e/M is an essential tool for visual color assessment, for the comparison of color variations and for the detection of metamerism (when color samples look the same under one light source but change distinctively when viewed under different lighting conditions).

Model PDV-2e/M3 includes three light sources: daylight (D65 or D50), store light (CWF or TL84) and home light (incandescent A).

The PDV-2e/M4 model includes those same light sources plus UV and also includes an elapsed time meter (ETM) to monitor the usage of the daylight source.
